SUMMARY

Backend Engineer with 5+ years of experience building banking, fintech, and enterprise systems. Delivered QRIS, BI-FAST, and Online Transfer APIs for a mobile banking application serving 1M+ users, and currently developing application for a digital payroll platform serving 12,000 existing corporate clients and ~38,000 HR users. Skilled in Java Spring Boot, Docker, Jenkins, Kafka, and PostgreSQL, with experience developing scalable backend services, integrating enterprise systems, and delivering reliable backend solutions for complex business requirements.

SKILLS

Languages: Java, Rust, SQL

Frameworks: Spring Boot, Axum

API & Integration: REST API, gRPC, Microservices, OAuth 2.0, Keycloak, Swagger/OpenAPI

Databases: PostgreSQL, MySQL, Redis, Elasticsearch, Firebase

Messaging: Kafka, ActiveMQ, Redis Pub/Sub

DevOps & Monitoring: Docker, Jenkins (CI/CD), AWS, Datadog

Tools: DBeaver, Postman, Git (GitHub, Bitbucket, GitLab), Jira

WORK EXPERIENCE

AMK Group — Backend Developer

Apr 2026 – Present

Project: CIMB Niaga OCTO@Work — HRIS Lite (Apr 2026 – Present)

- Build REST APIs in Rust (Axum, SQLx) and PostgreSQL for a digital payroll account-opening platform serving 12,000 corporate clients and ~38,000 HR users.
- Enable employer code synchronization and institution/employer data exchange via gRPC and REST integrations with internal banking systems.
- Automate L1/L2 approval workflows, delegated registration, audit trails, and PKS partnership-agreement generation, replacing manual document processing.
- Harden payroll onboarding flows with fallback handling for unavailable external services, keeping them reliable during dependency outages.
- Improve application observability with Datadog and contribute to HRIS frontend enhancements; use Agentic AI to speed up coding, debugging, and documentation.

OLX Indonesia — Backend Developer

Jan 2026 – Apr 2026

Project: OLX Mobile & Web App (Jan 2026 – Apr 2026)

- Maintained backend services and APIs for OLX's mobile and web marketplace using Java and Spring Boot, focused on automotive e-commerce features.
- Performed load and stress tests to pinpoint bottlenecks and validate API behavior under peak traffic.
- Debugged production issues on customer-facing marketplace features in collaboration with cross-functional engineering teams.

PT IDStar Cipta Teknologi — Backend Developer

Nov 2024 – Dec 2025

Project: CIMB Niaga Real Time Agent Assist — GenAI (Jan 2025 – Dec 2025)

- Embedded Google Speech-to-Text into a GenAI platform that processes hundreds of calls per day, turning recordings into transcripts for conversation analysis and automated summaries used by 100 customer service agents.
- Delivered CMS APIs for User, Role, and Report management, documented with Swagger/OpenAPI.
- Implemented Redis Pub/Sub for event-driven messaging and set up Spring Boot logging with Micrometer tracing to improve observability.
- Researched Keycloak SSO for authentication/authorization design and supported frontend and QA teams during integration and testing.

PT Infosys Solusi Terpadu — Java Developer

Feb 2021 – Nov 2024

Project: New BTN Mobile (May 2021 – Nov 2024)

- Shipped backend APIs in Java and Spring Boot for New BTN Mobile (1M+ users), covering QRIS, Online Transfer, BI-FAST, Bill Payment, and Purchase.
- Connected services to core banking for transaction processing, CASA account inquiry, and foreign-exchange rate calculation.
- Added push notifications for incoming and outgoing transfers, improving user awareness of account activity.
- Diagnosed and fixed a production decimal-format defect that caused incorrect debit calculations on transfers, preventing financial discrepancies.
- Contributed to the successful public launch of New BTN Mobile, scaling its user base from 500K to 1M+ as part of a five-team engineering program.

Project: Portal BTN Back Office — BTN Loan (Jan 2023 – Nov 2024)

- Created CRUD and back-office APIs for data management on BTN's internal portal, including mass-notification endpoints that deliver offers to users.
- Integrated back-office services with core banking systems to streamline loan disbursement on BTN Loan.
- Investigated and fixed production issues while coordinating cross-team integration to keep transaction processing reliable.

EDUCATION

Universitas Teknologi Yogyakarta

2016 – 2021

Bachelor of Informatics Engineering
